PROFESSIONAL SUMMARY

Full-Stack Software Engineer with hands-on experience building scalable web applications using Django, React, PostgreSQL, and RESTful APIs. Experienced developing modular backend systems, responsive frontend interfaces, authentication workflows, and database-driven applications within collaborative engineering environments.

Skilled in Python, Django, React.js, JavaScript/TypeScript, Git/GitHub workflows, API integration, debugging, testing, and modern software engineering practices. Passionate about solving real-world problems through technology, building maintainable systems, and contributing to high-impact engineering teams.

Strong interest in SaaS platforms, workflow systems, AI-assisted engineering productivity, scalable backend architecture, and modern frontend development.

TECHNICAL SKILLS

Backend Development

Python, Django, Django ORM, REST API Development, Authentication & Authorization, Business Logic Implementation

Frontend Development

React.js, JavaScript (ES6+), TypeScript, Responsive UI Development, Component-Based Architecture, HTML5, CSS3, Tailwind CSS

Database & Data

PostgreSQL, SQLite, Relational Database Design, Query Optimization Fundamentals

Tools & Platforms

Git, GitHub, Postman, Docker, Linux Command Line, JIRA, AWS Fundamentals (EC2, S3, IAM)

Engineering Practices

Agile Collaboration, Debugging & Refactoring, API Integration, Documentation, Testing Fundamentals, Code Reviews, AI-Assisted Development Workflows

EXPERIENCE

Full Stack Developer — Collaborative Engineering Projects

Solutions Community | 2026 – Present

- Developed and maintained full-stack web applications using Django, React.js, PostgreSQL, and RESTful APIs within collaborative engineering teams.
- Implemented frontend components, backend endpoints, authentication workflows, and database-driven features across multiple applications.
- Worked on structured development tasks including debugging, API integrations, feature implementation, UI improvements, and workflow enhancements.
- Collaborated using Git/GitHub workflows and Agile-style software development practices.
- Participated in technical discussions, testing, documentation, troubleshooting, and application maintenance activities.

- Contributed to scalable and maintainable application architecture using modular development principles.
- Used AI-assisted development tools to improve engineering productivity, debugging efficiency, and development workflows.

Software Engineering Virtual Experience

Electronic Arts (Forage) | Nov 2025

- Contributed to structured C++ codebase improvements through debugging and refactoring.
 - Practiced collaborative Git workflows and structured documentation in distributed engineering environments.
 - Applied object-oriented programming principles and analytical problem-solving techniques to improve reliability and maintainability.
 - Participated in simulated production-style engineering workflows and technical development tasks.
-

PROJECTS

Sweet Crumbs

Django | React | PostgreSQL | REST APIs

GitHub: <https://github.com/Biden254/Sweet-Crumbs>

- Built a modular full-stack application using Django and React with PostgreSQL-backed architecture.
- Designed and implemented RESTful API endpoints supporting frontend-backend communication.
- Structured Django applications into reusable domain-based modules for scalability and maintainability.
- Implemented secure authentication workflows using django-allauth.
- Developed responsive React frontend components and integrated API-driven workflows.

- Configured production-ready settings using environment variables and PostgreSQL integration.
- Applied debugging, testing, and refactoring practices to improve system reliability.
- Documented architecture decisions, setup instructions, and deployment configurations.

Smart Attachment System

React.js | Python | PostgreSQL

GitHub: <https://github.com/Biden254/smart-attachment-system>

- Developed a full-stack platform connecting students with internship and attachment opportunities.
- Built responsive frontend interfaces using React.js for improved usability and accessibility.
- Designed backend APIs and database systems to manage workflows and application data.
- Implemented role-based authentication and authorization for secure platform access.
- Digitized reporting and supervisor feedback processes to improve operational efficiency.
- Applied scalable application design and collaborative development practices throughout the project lifecycle.

Luxe Voyage — Travel Booking Platform

PHP | JavaScript | REST APIs

GitHub: <https://github.com/Biden254/Luxe-Voyage>

- Developed a responsive full-stack booking platform with REST API integration.
- Designed backend functionality for bookings, authentication, and user management.
- Modeled relational database structures supporting scalable booking workflows.
- Implemented role-based access control for customers and administrators.
- Applied debugging and troubleshooting techniques to improve reliability and usability.

Julie Bakers — React Frontend Application

React.js | REST Integration

GitHub: <https://github.com/Biden254/Julie-Bakers>

- Built responsive frontend interfaces using reusable React components.
 - Integrated frontend workflows with backend REST APIs.
 - Improved cross-device compatibility and user experience through responsive UI design.
 - Applied modern frontend development practices to improve maintainability and performance.
-

EDUCATION

Bachelor of Science in Computer Science

Dedan Kimathi University of Technology

2024 – Present (Expected 2027)

CERTIFICATIONS & TRAINING

- AWS re/Start Program
- Cisco Python Certification
- Software Engineering Bootcamp — Power Learn Project
- AWS DevOps Training (In Progress)
