

LOREN DEKLERK

Nairobi, Kenya | +254 717 574 728 | bidendeclerk@gmail.com

Portfolio: deklerk.netlify.app | GitHub: [Biden254](https://github.com/Biden254) | LinkedIn: [loren-deklerk](https://www.linkedin.com/in/loren-deklerk)

PROFESSIONAL SUMMARY

Software Engineer and Computer Science student with hands-on experience building and deploying full-stack web applications from idea to production. Experienced in Python, React, TypeScript, Django, PostgreSQL, cloud deployment, and REST API development.

Currently contributing as a volunteer Full-Stack Developer for a US-based startup, collaborating remotely with product managers, designers, and engineers in Agile development. Passionate about solving real-world problems through software, learning quickly, and taking ownership of products in fast-paced startup environments.

TECHNICAL SKILLS

- **Programming Languages :** Python, TypeScript, JavaScript (ES6+), SQL, C++
 - **Frontend Development:** React.js, Next.js, HTML5, CSS3, SCSS, Bootstrap
 - **Backend Development:** Django, Node.js, Express.js, REST API Design & Development
 - **Databases:** PostgreSQL, MySQL, MongoDB, Firebase Firestore
 - **Cloud & DevOps:** AWS (EC2, S3), Docker, Git, GitHub, CI/CD Pipelines, Application Deployment
 - **Software Engineering:** Agile Development, Test-Driven Development, Debugging, Code Reviews, Cross-Functional Collaboration, System Design, Technical Documentation
-

PROFESSIONAL EXPERIENCE

Full-Stack Developer (Volunteer)

Solution Community (US Startup) | 2026 – Present

- Develop production-ready features using React, TypeScript, Firebase, and modern web technologies.
- Collaborate with engineers, designers, and product managers across multiple time zones.

- Participate in code reviews, testing, debugging, and sprint planning.
- Build scalable frontend and backend functionality for a cloud-hosted platform.
- Use GitHub workflows and Agile methodologies to deliver features efficiently.

Software Engineering Virtual Experience

Electronic Arts (EA) | November 2025

- Resolved software defects within a large-scale C++ codebase while maintaining existing functionality and code quality standards.
- Applied debugging and analytical problem-solving skills to investigate and resolve technical issues efficiently.
- Worked with Git workflows, including branching, merging, and version control best practices.
- Gained exposure to enterprise software engineering processes and collaborative development environments.

PROJECTS

Workflow Tracker

Django | React | PostgreSQL | REST APIs

- Developed a full-stack workflow management platform supporting task tracking, reporting, and team collaboration.
- Designed and implemented RESTful APIs and relational database models to manage workflow and operational data efficiently.
- Built secure backend services using Django and PostgreSQL, enabling reliable data storage, retrieval, and reporting.
- Integrated React frontend components with backend services to deliver a responsive and scalable user experience.
- Applied Agile development practices, testing, and debugging techniques throughout the development lifecycle.

Smart Attachment System

Django | React | PostgreSQL | AWS | REST APIs

- Developed a secure document and attachment management platform to streamline business workflows and improve information accessibility.

- Designed and implemented RESTful APIs supporting document processing, metadata management, and workflow integration.
- Built authentication and role-based authorization mechanisms to support secure handling of user-generated content and sensitive data.
- Developed cloud-hosted file storage and retrieval services with emphasis on scalability, reliability, and maintainability.
- Improved operational efficiency by centralizing document management and reducing manual file-handling processes.

Smart Emergency Dispatch System

Python | Asyncio | Event-Driven Architecture

- Designed and implemented a real-time emergency dispatch platform capable of coordinating concurrent response workflows.
- Built asynchronous backend services using Python and Asyncio to process multiple emergency requests efficiently.
- Implemented task prioritization and event-driven processing mechanisms to improve system responsiveness and operational reliability.
- Applied scalable software design principles to support high-volume workflow execution and real-time event handling.
- Developed maintainable backend architecture focused on performance, fault tolerance, and efficient resource utilization.

Luxe Voyage Web Application

PHP | PostgreSQL

- Developed full-stack functionality supporting authentication, authorization, and role-based access control workflows.
 - Built reusable React components and scalable frontend architecture to improve maintainability and development efficiency.
 - Implemented responsive user interfaces optimized for desktop and mobile experiences.
 - Integrated frontend and backend systems through RESTful APIs to deliver seamless user interactions.
 - Collaborated on testing, deployment, and iterative feature delivery using modern software engineering practices.
-

EDUCATION

Bachelor of Computer Science (Ongoing)

Dedan Kimathi University of Technology | Expected 2027

CERTIFICATIONS

- AWS re/Start Program Graduate
 - Cisco Certified Python Programmer
 - AWS DevOps Certification (In Progress)
-
